

Door Hanger Kit Instructions

Step 1

Stain: Using the foam brush, apply the stain to your project and use the paper towel provided, to wipe the stain off. This is a craft stain so it dries quick. For large projects, we suggest working in small sections at a time. The picture below is just a sample, feel free to get creative and make it your own!

Step 2

Dry Brush: Using the bristle brush, lightly dip the tip of the brush into the paint, make sure the bristles still appear separate instead of clumped together. For optimal results, the brush should be as dry as possible. Blot the brush on a cloth or paper towel to remove the excess paint while retaining a hint of color. Brush on a single coat of paint with light pressure and short, fast strokes. You may choose to use multi-directional strokes for a more irregular finish or brush only in the direction of the grain for more uniform streaks. Repeat this step with multiple light coats until you achieve the look you are going for. Rinse & dry the brush and repeat with other colors as needed.

Step 3

3-D Pieces: Using the white sponges provided, hold the small end and dip the larger end into your paint. Dab off the excess paint and apply THIN (REALLY THIN) coats to the wood pieces in dabbing motions. Dab straight up and down and do not wipe or smear the paint. Continue to add THIN layers of paint until all areas are well covered. LESS IS BEST. This will ensure that the paint is only on the top of your wood cutouts. Since these pieces are laser cut we do not recommend painting the edges because they do not always cover well.

Step 4

Once your pieces are dry use the glue provided to attach them. Hold them in place for a minute or 2 as the glue dries. Then add the rope through the holes in the top with a simple knot at both ends.

Step 5

Bow: Take your pieces of ribbon and arrange them in a criss-cross pattern, pinch them together in the center and wrap the twine around the center. Attach your bow and take a step back to admire your creation.
